

American Solar Roof

Harness the power of the sun.

PV is EZ!

American Solar Roof offers several options for financing.

One popular way to “go green” is what we call a Power Purchase Agreement (PPA). This is where our company will install a PV system on your roof, *free of charge*, with the understanding that you will purchase the electricity that is produced by the system for a period of 15-30 years. Each state has different programs in place to help with financing, and we will be happy to coordinate that for you. Even better, we will give you a discount of 5-10% compared to what you would normally be paying the power company. Typically, we start at a 2% discount, and gradually increase the percentage to 10%, where it will remain for the life of the contract. Without investing a dime, you can “go green”, and start saving money immediately. Getting started is as easy as just saying “yes!”
