

SCHOOLS PROGRAM POWERPLANTS ON ROOFTOPS

THE BIG BUDGET SQUEEZE

Statistics show that energy is the largest single operating expense for a school. Our strategy is to assist school districts in implementing a program to install Solar Electric Roof Systems to produce clean energy at a fixed price so that administrators have a predictable budget for energy without the increases in cost. Escalating energy costs can severely impact budgets, thereby reducing supplies and programs available to teachers and students. Budget tightening in many districts has gone as far as possible in the past few years and administrators are trying to squeeze as much as possible out of what is left to assure the quality of education for our students.

HOW CAN A SOLAR ELECTRIC SYSTEM HELP?

By utilizing rooftops as a clean energy source, schools can reduce their cost of energy, achieve energy price stability, and reduce CO2 emissions. Installation of solar electric systems incorporated with roof systems provides a durable,

lightweight power plant on your roofs that can provide up to 100% of a building's energy requirement AND keep the facility dry—all with a combined 20 year solar/roof warranty. Every year millions of square feet of roofs are replaced at schools across America. Replacing and resurfacing them with a Solar Electric Power Plant is worthy of consideration as an operating cost reduction strategy.

HOW COULD MY SCHOOL GET A SOLAR ROOF SYSTEM?

Our process is to assist the district in evaluating the condition of your existing roofing inventory and installing new ASR Solar Electric Roof Systems as the old roofs are replaced.

HOW CAN WE AFFORD SOLAR SYSTEMS ?

Investors can provide the equipment to the district at no cost if the district agrees to purchase the power generated at a fixed rate. This provides predictable energy costs and usually the rate structure is less than you are paying now.

HOW DO WE GET STUDENTS INVOLVED?

Our educational program includes ASR funded educational programs for students and parents. Selected students can participate in a program to perform facility audits and prepare energy solutions for presentation to the school board. Each ASR system has a kiosk that provides real time system information for students and teachers.
